# Add additional requires below this line. Make sure to require any model
# Requires supporting ruby files with custom matchers and matchers
# spec/support/ and its subdirectories. These files will be loaded
# run as spec files by default. This will be the case when running
# in _spec.rb will both be required as well as the support files
# run twice. It is recommended that you do not require any
# end with _spec.rb. You can configure the require helper to
# option on the command line: $ bundle exec rspec --require
